

Figure 34

*Myxobolus kisutchi* spores (arrows) in the spinal cord of a fingerling coho salmon. Note the lack of inflammatory response in the peripheral area of the spores.

M-G G stain. X1700.

(Courtesy of H. Wolf)

Figure 35

*M. kisutchi* spores in the spinal cord, just posterior to the medulla oblongata of the fingerling coho salmon.

M-G G stain. X 3500.

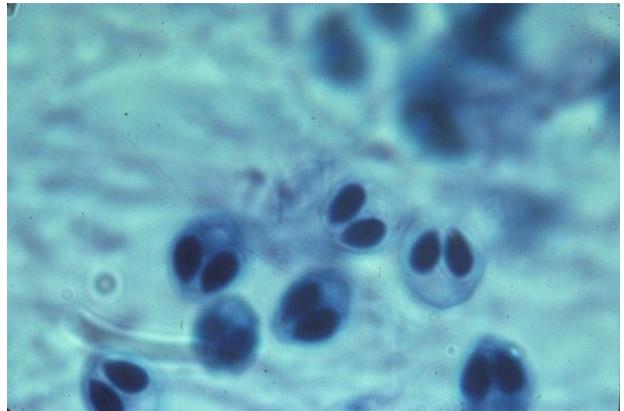

Figure 36

*Parvicapsula* sp., myxosporean spores (arrows) in wet mount of pen-reared yearling coho salmon kidney. Note two spherical eye-like polar capsules.

DIC. X1600.
