

Figure 22

*C. shasta* trophozoites and spores. Note the spores (arrows), some of which are destined enough to exhibit the paired polar capsules.

M-G G stain. X640.

Figure 23

*Myxobolus (Myxosoma) cerebralis* infection in yearling cutthroat trout, *O. clarki*, showing scoliosis and lordosis. Top two fish are normal.

Figure 24

*M. cerebralis* spores (arrow) in wet mount made from infected fingerling steelhead trout, *O. mykiss*.

Differential interference contrast (DIC). X1800.
